

the simple settings you'll see is what would be common as well as those features that vary as you further explore the help file. the help file contains many, many help files that point to content within the program. to summarize, this is a great way to get hands-on help from one place. the full version of this new app should also provide you with a means to backup your own x-refs, quick start guides, sdk information, user guides, etc. all you need to get started is a valid registration key for the x-force 2012 release 1 (the version in the app). it should save you a trip to the autodesk x-force website or perhaps even our online help site. it's as easy as that. this is based on a standard html help file template. depending on the development methodology that the user is using, much or all of this contents of the x-force app may be optional or fixed. this is also a standard practice. as such, it is totally up to the x-force developer to pick and choose what they feel is the best method for providing help. the user will need to have another application installed and running in order to be able to access the application help file within this app. this is a way to provide a more centralized mechanism to access a number of autodesk x-refs and more advanced help files. users will need to have a standard copy of autocad installed in order to be able to see the information stored within the app. users that are currently being serviced via remote desktop will not be able to access these items. we strongly suggest, if you plan on using the app, to upgrade to the autodesk 2012 release 1 x64 edition.
